

Nama: Ade Humat

No.: Kelas: TIF K 22 B

Date.:

1.  $f(x) = 3 + \sqrt{2 - 4x}$   $x = \frac{1}{2}$

$$2 - 4x \geq 0$$

$$4x \geq -2$$

$$x \geq -2/4$$

$$x \leq \frac{1}{2}$$

$$f\left(\frac{1}{2}\right) = 3 + \sqrt{2 - 4\left(\frac{1}{2}\right)}$$

$$= 3 + \sqrt{2 - 2}$$

$$= 3 + \sqrt{0}$$

$$= 3$$

Jadi:

$$D_f = \{x \mid x \leq \frac{1}{2}, x \in \mathbb{R}\}$$

$$R_f = \{y \mid y \leq 3, y \in \mathbb{R}\}$$

2.  $f(x) = \sqrt{\frac{x(x-3)}{x-1}}$

- Syarat bilangan di bawah tidak boleh negatif

- dan syarat pecahan agar memiliki nilai penyebut tidak boleh 0

$$\frac{x(x-3)}{x-1} \geq 0 \text{ dan } x-1 \neq 0$$

$$\rightarrow \frac{x(x-3)}{x-1} = 0 \text{ atau } \frac{x(x-3)}{x-1} > 0 \text{ dan } x \neq 1$$

$$f(x) = \sqrt{\frac{x(x-3)}{x-1}}$$

$$\geq \sqrt{0} \checkmark$$

$$D_f = \{x \mid 0 \leq x < 1, x \geq 3, x \in \mathbb{R}\}$$

$$R_f = \{y \mid y \geq 0, y \in \mathbb{R}\}$$

No.:

Date.:

$$3. f(x) = 3x - \frac{1}{x} + 2$$

$$= x(3x) + (-1) + x \cdot 2 \quad | \cdot x$$

$$= \frac{3x^2 + 2x - 1}{x}$$

Jadi :

$$x \neq 0$$

$$D_f = \{x | x \in \mathbb{R}; x \neq 0\}$$

$$R_f = \{x \in \mathbb{R}\}$$

$$4. f(x) = \sqrt{x^2 - 5x + 6}$$

Karena hasil substitusi  $x$  ~~adalah R~~ <sup>dengan R</sup> tidak ada hasil negatif  ~~$x = -1$  lampiran~~

hasilnya tidak negatif

Jadi :

$$D_f = \{x | x \in \mathbb{R}\}$$

$$\cancel{R_f = \{x \in \mathbb{R}\}} \quad R_f = \{y | y \geq 0, y \in \mathbb{R}\}$$

$$5. f(x) = \sqrt{4-x}$$

syarat akar tidak boleh negatif

$$\text{Jadi : } D_f = \{x | -4 \leq x \leq 4, x \in \mathbb{R}\}$$

$$R_f = \{y | 0 \leq y \leq 2, y \in \mathbb{R}\}$$

$$\cancel{R_f = \{y | y \leq 0\}}$$
